

ACCOUNT ADMINISTRATION · VERSION 2.0

Administrator Manual

Creating and maintaining Document & Records Management and department-reviewer accounts.

EGAS Employee Clearance System

Verified against the application and source code

16 August 2026

Purpose and authority

An Admin manages operational user accounts. Admins do not process or view employee clearance requests and cannot manage Admin or Super Admin accounts.

1. Sign in and password security	Access
2. Create operational accounts	Daily task
3. Reset or delete accounts	Maintenance
4. Troubleshooting and checklist	Reference

Your boundary: you may manage only `file_management` and `reviewer` accounts. Ask the Super Admin to manage an Admin account.

1. Sign in and password security

Login screen. The demo-account picker is a development feature and may be absent in production.

- 1 Open the website address supplied by IT.
- 2 Enter your work email and password. There is no self-registration. On your very first login, this is the exact password the Super Admin entered when creating your account — it is already your real, permanent password, not a placeholder.
- 3 Select **Log in**; the system routes you to the Admin dashboard.
- 4 Use the language/theme controls as needed and log out when finished.

Temporary password after a reset

If the Super Admin later reset your password (a forgotten-password recovery, separate from account creation), log in by entering the one-time password provided by the Super Admin. That one-time password only permits you to open **Set new password**, where you choose a new permanent password of at least 12 characters containing a symbol. There is no skip option.

Re-authentication

Creating, resetting, and deleting accounts requires your current password again. Enter your own password—not the affected user's.

Forgotten password

Use the help link on the login page to obtain Super Admin contact details. Password recovery is assisted; the system does not email reset links.

2. Create operational accounts

The screenshot shows the EGAS Employee Clearance System Admin dashboard. The header includes the EGAS logo, the text 'EGAS Employee Clearance Employee Clearance System', a welcome message 'Welcome back, Admin Demo Account', and links for 'Account management', 'المراقبة' (Monitoring), 'Dark mode', and 'Log out'. The main content area features a 'Create a new account' form with fields for 'Your password (re-authentication)', 'Full name', 'Landline number', 'Email', 'Password', and 'Confirm password'. A note specifies 'At least 12 characters, including a symbol' for the password. A 'Role' dropdown menu is set to 'Document and Records Management'. A 'Create account' button is at the bottom of the form. Below the form is a section titled 'All accounts' showing a list of accounts with a count of 33.

Admin dashboard: account creation form and accounts within the Admin's management boundary.

- 1 Enter your current Admin password in the confirmation field.
- 2 Enter the employee's full name, internal landline number, work email, and a strong password.
- 3 Choose **Document and Records Management** or **Department Reviewer**.
- 4 For a reviewer, select the correct department. For IT, also select one unclaimed checklist item.
- 5 Review every value, create the account, and transmit the password through an approved secure channel.
- 6 Tell the user this is their real, permanent password — the site does not force them to change it at first login. If they want a different password, they must ask you to reset the account (see section 3), which does force a change on next login.

IT assignment is exclusive: each of the five IT checklist items can belong to only one account. If an item is unavailable, verify the existing account instead of assigning a different item as a workaround.

What each role does

Role	Purpose	Required assignment
Document and Records Management	Creates, monitors, reviews, approves, and—after completion—deletes clearance requests.	No department

Role	Purpose	Required assignment
Department Reviewer	Reviews and signs for one department.	Department; IT also requires one checklist item

3. Reset or delete accounts

Reset a forgotten password

- 1 Confirm the user’s identity according to EGAS policy and match the exact email.
- 2 Select **Reset password**, enter your own password, and set a strong temporary password.
- 3 Send it securely. The user must replace it immediately after login.

Delete an account

- 1 Confirm the exact email, employment status, replacement coverage, and organizational approval.
- 2 Select **Delete**, read the warning, and enter your current Admin password.
- 3 Confirm deletion only when permanent removal is intended.

Deletion is permanent. Do not delete an account merely to resolve a password problem. Before deleting a reviewer—especially an IT owner—ensure another appropriately assigned account can cover future work.

Admin can	Admin cannot
Create/list/reset/delete operational accounts	Manage Admin or Super Admin accounts
Assign reviewer departments and free IT items	See, sign, approve, or delete clearance requests
Provide assisted password recovery	Reset or delete the Admin’s own account

4. Troubleshooting and checklist

Problem	Likely cause	Action
Account creation rejected	Missing field, invalid role/department, weak password, duplicate email, or claimed IT item.	Read the message and correct the specific field.
Current password rejected	The confirmation password is not the signed-in Admin's current password.	Re-enter your own current password.
Admin account is not listed	Admins cannot manage peer Admin accounts.	Contact the Super Admin.
User sees only "Set new password"	The account has a temporary password.	Create a permanent password meeting the displayed policy.
IT item is unavailable	Another account owns it.	Review/reset/delete the correct owner only after approval.

Before ending a session

- ☐ Verify created accounts have the correct email, role, department, and IT assignment.
- ☐ Do not record temporary or Admin passwords in tickets or screenshots.
- ☐ Confirm operational coverage before deleting an account.
- ☐ Log out on shared workstations.
- ☐ Escalate unexpected permissions or data visibility to IT immediately.

Verified 16 August 2026. EGAS organizational policy remains authoritative where it adds controls.
